Agenda I: To introduce the project to the Community

- This is a Kenya Government project designed to get power from Southern Ethiopia and a substation at Suswa.
- Land for the substation has already been identified at Suswa market.
- A 65m corridor (Right of Way) will commence from the substation taking a generally North

westerly direction to northern Kenya to Ethiopia.

All those landowners whose land will fall within the Right of Way will be compensated of the land and other developments. The compensation will be at market rates.

- The team requests land owners to cooperate with the team in the course of the interviews ongoing at household levels along the entire Right of Way.

Agenda 2: To obtain community views about the project

- The community supports the project since it is a government project and will bring development
- The contractor should not cheat or renege on agreements reached with the community the way other contractors at Olkaria have shortchanged the Maasai.
- The contractor should ensure that all local jobs/tasks are given to the local people and only those technical ones that local people cannot do are given to outsiders.
- This area is dry. So they appeal to the contractor to assist in form of compensation to the community especially regarding water.
- The landowners must be compensated before the ~~the~~ commencement of the construction.

Agenda 3: To obtain socio-economic and Environmental information.

The community provided: Administrative, Environmental information on trees, animals and garbage disposal.

Other areas were: Waste management, Uses of Surrounding Area, Harvests, population, occupation, Religion, ~~the~~ Community Infrastructure, Workforce, Services, Community compensation priority areas. The

• They also raised the following issues:

- Compensation of land owners
- Contractor to follow agreement with the Community
- Contractor to prioritize local people in employment.
- Contractor to prioritize local people for business contracts.

Signed: 

Date: 13-9-2011

Chief: Dansen Reson

Agenda

1. Introduce the project to the community.
2. To obtain socio-economic and environmental information about the community.
3. To discuss the school: Gettle Belle primary school in the ROW.
4. To ~~be~~ obtain community concerns about the project.

1. To introduce the project to the community
 This is a government of Kenya project that has a planned construction of a high voltage power line originating from Ethiopia to Suswa. The line takes a ROW of 65 metres.
 The ~~line~~ ROW is a generally straight one without abrupt corners.
 It ~~will~~ will pass through individual

farms, buildings, public institutions along.

- The compensation will be done in advance to property owners at market rate.
- What the team is doing is called ~~Survey~~ Environmental and Social Impact Assessment to the community. As of today the ~~line~~ ROW is proposed and may be confirmed intact or with some adjustments depending on the Engineers design.
- The team urges the community to cooperate with the household interviewers who are undertaking the interviews.

~~2. To~~

Agenda 2: To obtain Socio-Economic and Environmental Information

~~Names of~~ Wild Animals common in this area - were identified as: Zebra, Gazelle, Leopard, Hyena, Porcupine, Buffalo. The common trees were those used for timber, firewood, charcoal, fodder and construction of houses.

- The dominant ethnic group is Kikuyu. ~~They are~~ The Maasai constitute a minority in the area.
- Most people are small scale and mixed farmers.
- Most people here are Christians mainly

protestant and Catholic who constitute about 98%.

- There are primary schools, secondary schools, health centre, trading centre but only one trading centre is connected to electricity.
- The community has a huge potential of existing ~~to~~ workforce.
- The community has people who have ability to provide ~~the~~ most services during construction. However heavy machinery contractors are not available.
- One primary school donated by a donor whom the community was not willing to disclose is affected. This is a private primary school.
- The community was willing to have it relocated to a nearby area if it is compensated materially and in terms of disturbance and lost time.
- The community prioritized a water project as the most critical since this is a dry area.
- The community was of the opinion that local people be considered first for employment during the construction period.
- That community compensation project be ~~of~~ undertaken at the beginning of the project construction to ensure ~~avoid~~ the contractor fulfill the pledge.

Agenda 3: To discuss Gentle Bells primary School.

- This is a private school donated by a donor whom the community declined ~~to~~ to disclose the identity.
- The community fears that if the school is relocated the donor may withdraw further funding. So they pray the line be shifted instead.
- The school has 6 permanent classrooms, 1 permanent
- ~~While there is abundant land in~~ Administration Block. It has 137 pupils, and 9 teachers, ~~over~~ 8 VIP Toilets, one urinal, fence.

Agenda 4: To obtain Community Concerns about the Project

The community felt that although it is a Government project the line can be moved to save the school.

- That fine compensation be done beforehand before relocation begins.
- Enough time be given for people affected to relocate.
- There is confusion in this area about power lines because recently they had a meeting similar to this one about another powerline from Turkana.
- What would happen to graves that fall in the ROW?
- The owners of the school should also be compensated.
- The community also wanted to know if
