- 4 Lmailon leandro
5. Ltayaloto lekatwan
6. Lmiton lechakwe
7. lotorlo lesilan
8. Korando letaapo
9. HKARIEITAN Kasya

Agenda

1. To introduce the project to the Community
 2. To obtain socio-economic and Environmental Information.
 3. To obtain community feedback about the project.
1. Agenda I: To introduce the project to the Community.

The Ethiopia-Kenya Power project is a

Government of Kenya project meant to increase power supply in Kenya.

This project was first undertaken in 2007 and today we are only updating the information.

The ROW will be 65m wide. All buildings or trees in the ROW will be demolished or cut down but only after compensation of the owners. Adequate time will be ~~provided~~ given so that those affected can relocate.

- The aim of this assessment is to record all that is found in the ROW to inform decision making.
- During construction each location crossed by the proposed line will elect a committee to oversee relations with the contractor.
- Therefore the community is urged to cooperate with the team by providing information.

Agenda 2:

To obtain Socio-economic and Environmental information

The dominant community is Rendille.

There is plenty of wildlife whose numbers increase during the wet season. Lions, hyena, elephant, giraffe, gazelle etc are very common.

- There are few schools, has dispensaries and all have no electricity.
- A considerable proportion of people here practice traditional religion.
- The community has a vibrant water hole with high water productivity.

Logologo Page 3

- The community is not connected to electricity.
- The village is the home of the current Member of Parliament for Laisanie Constituency.
- The community depends over 80% on famine relief.

Agenda 3: To obtain community feedback about the project.

The community members were concerned about the fact that they have no electricity yet they will host a power line. They should be considered for connection.

- They also expressed the fact that many trees will be cut down within the ROW thereby depriving livestock and wildlife of fodder.
- Since this area has never had electricity there should be sensitization of the people on the do's and don'ts concerning electricity.
- The community had no objection to the project.

Agenda

1. To introduce the project to the community
2. To obtain socio-economic and environmental information.
3. To obtain community views and concerns about the project

Agenda I.: To introduce the project to the community

Turbi page 3

This is a government of Kenya project commencing from Svsua to E Ethiopia.

This project was first undertaken in 2007 and now it is being updated.

The aim of this assignment is to obtain socio economic and environmental information to find out or determine the effect of the project on the local community and environment.

The ~~is~~ ROW is a 65m wide corridor running ~~for~~ in a generally straight way.

Those people whose structures or other property will be in the ROW will be compensated in advance and given enough time and notice to reconstruct and relocate.

Public institutions will equally ~~to~~ be compensated.

During construction a local committee comprising of locally elected people - men and women will oversee relations between the contractor and the community.

- Therefore the team requests the community to cooperate with the Assessment team in providing the necessary information.

Agend 2: To obtain Socio-economic and ~~the~~ environmental information.

The Gebra community is the dominant ethnic group in this area comprising over

Turbi Page 4

- 90% of the total population. Others are the Sakuye, Burji and Somali.
- The area has ~~so~~ many wildlife especially hyena, lion, giraffe, gazelle.
 - The area experiences acute drought which often kills wildlife, ~~and~~ human beings and livestock.
 - There are few people with skills in this area.
 - The area is predominantly pastoralist and experiences ~~an~~ acute water problems.
 - This area is on the edge of Bubuza desert.
 - The area is renowned for conflict and murder in this region, locals, Ethiopians who crossed into Kenya.

Agenda 3: To obtain community views and concerns about the project.

The community supported the project in totality. However they had the following concerns which they would want addressed.

- (i) The area has a lot of wildlife many of which die during drought due to lack of water. They would like the project to benefit both wildlife and people by providing and increasing access to water.
- (ii) The area should also be connected

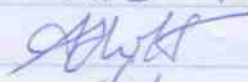

Turbi page 5

25/9/11

to electricity since it is rotated. That it would be ironical to host a powerline but fail to be connected.

- That if connection directly from the proposed powerline will be difficult then a fee alternative wind energy be considered. The area has very strong wind from which power can be easily generated.
- The other concern is the potential danger the powerline ~~will~~ will expose the people, livestock and wildlife to. They fear that the pylons will ~~be~~ be active hence any contact with it will lead to death.
